Publishing React Native Apps

With Expo
(Managed or Bare Workflow)

Configure the Project

↓

Build App Binaries with Expo's Cloud Service

Advantage: No local resources used & you can build for all target platforms

↓

Submit to App Stores

Without Expo

Configure the Project

↓

Build App Binaries Locally

↓

Submit to App Stores

Configuring For Production

Permissions → **Android**: Control permissions requested & shown in app store
iOS: Define permission request text snippets

App Name & Identifier → Set the visible app name, an app version and a unique app identifier (ID)

Environment Variables → Store app-wide variables securely (e.g., API keys)

Icons & Splash Screen → Configure and generate fitting icons and loading screens
